

Web Hosting

Passwords

In order to manage your account, you may have up to four different passwords. How you get these depends on whether you are using our traditional hosting or our cPanel hosting.

- **FTP:** Your web site will be assigned a username and password for [ftp](#). FTP (File Transfer Protocol) is the way you will send (put) and retrieve (get) your web site files. If you use our traditional hosting, please contact [support](#) if you need this password changed.
- **Admin:** If you use our traditional hosting, this password will access your on-line administration functions. You can make this password the same as your other passwords or it can be different. You can reset it yourself using the [password protection system](#). Use the [password protection instructions](#) if you have any problems using the system.
- **Mail:** This password will access the [e-mail management system](#) if you have mail with us. This can be the same as your other passwords or it can be different. You can change this password by changing the password assigned to your Postmaster account.
- **SQL:** This password will access your SQL database if you have one. This can be the same as your other passwords or it can be different. If you use our traditional hosting, please contact [support](#) if you need this password changed.

Unique solution ID: #1028
